

- ✓ The space for the hinge is achieved within the design of the frame, therefore eliminating the panel hinge cutout and multiple mitered sections of the traditional design.
- ✓ The single frame extrusion, with ribs and cross sections, provides a much stronger and more stable structural assembly, imperative for lasting performance.

Shown in Beige w/ 24" bumpers

The Phoenix Series of insulated impact doors have a patent-pending design that eliminates the weakest structural component of the traditional impact door.
